

ECONOMIC BENEFITS OF PARKS, GREENWAYS, AND OPEN SPACE

This information was compiled by Ruth Taylor Kilday, Mountains Conservancy Foundation, from "Economic Impacts of Protecting Rivers, Trails and Greenways Corridors," A Resource Book, Prepared by Rivers and Trails Conservation Assistance, National Park Service, U.S. Department of the Interior, 1990 Edition, funded in part by The Conservation Fund.

- **Increased Property Values:** Open space and parks provide a variety of amenities such as preservation of waterfront and land, convenient educational and recreational opportunities, attractive views, and wildlife enhancement. This can be reflected in increased property values and increased marketability for property located near open space and parks.
- **Expenditures by Residents:** Leisure time activities, educational pursuits, and recreation expenditures can account for substantial portions of family spending. This can include educational courses, scientific study, and recreational pursuits such as special events, walking, running for health, physical fitness/health, camping, hiking, bicycling, fishing photography, sailing, equestrian uses and driving for pleasure.
- **Commercial Uses:** Open space and parks can provide opportunities for businesses, film locations and other resources for commercial activities. Communities along the park boundaries can provide visitor services which include special events, food, recreational equipment sales and rentals, lodging and convenience items.
- **Agency Expenditures:** The major agencies involved in acquiring and managing land support the local and regional economy by providing jobs, purchasing supplies and services to develop, operate, and maintain parks and related improvements. Numerous nonprofit and community groups focusing on environmental quality also effect the economy. Employment generated by parks can be targeted by the managing agency to benefit particular needs of the community such as high unemployment, youth at risk and the handicapped.

The federal government pays a prorated lump sum to each county within which federal land is owned to defray the loss of a tax base due to federal ownership of the land.

- **Visitor Services / Travel Industry:** Travel and tourism will be the leading industry in southern California by the year 2000 and is increasing in relative economic importance. Natural, historical, cultural and recreational pursuits are very relevant today. Weekend and weekday trips are on the increase and two week vacations are on the decline. Open space and parks provide unique resources which nearby travel and tourist-serving establishments, chambers of commerce and local visitor bureaus can capitalize on and feature in their ads.
- **Corporate Relations:** The Joint Economic Committee of the U.S. Congress reports that a city's quality of life is more important than purely business-related factors when it comes to attracting new businesses, particularly the rapidly growing high tech and service industries. Quality of life aspects include convenient access to natural settings, recreation and cultural opportunities and open space. Companies realize the benefits of healthy employees, both in increased efficiency and decreased health insurance claims. Open space and parks can provide these convenient opportunities.
- **Public Cost Reduction:** By conserving open space and parks rather than permitting intensive development, local agencies may reduce costs for public services such as sewers, trash, water and roads. The choices between retaining undeveloped land as open space or allowing development must be considered. Expansion almost always results in increased public service requirements. In many situations, the cost of providing these services to development is much higher than any revenue to local governments resulting from an expanded tax base.
